Customer Report

Login issue fix

Root Cause Analysis

CONFIDENCE SCORE	70%	✓ HIGH
The reported 'Login issue fix' (interpreted as an active login issue) in the production environment (v1.0) is likely related to the problem addressed by commit `1450661` titled 'Fix login issue in Auth.js' by Vignesh Prasad on 2026-03-20. It is hypothesized that either this fix has not yet been deployed to the affected production environment, or the fix itself is not fully effective in resolving the reported login issue. (Source: Support Ticket Summary, GitHub Commit `1450661`)		

Immediate Actions

1	Request more specific details from the user regarding the login issue, including exact error messages, symptoms, and steps to reproduce.
2	Verify if commit `1450661` has been deployed to the production environment (v1.0).
3	If commit `1450661` is not deployed, plan for its deployment to the production environment.
4	If commit `1450661` is already deployed, investigate the effectiveness of the fix and check for any regressions introduced by it.
